

Conn Status

List outbox pending vs inbox acked connector jobs

Specialist: Messaging + host engineer.

Installation – Conn Status

Requirements

- Peergos account on a Verae host
- Permissions: STORE_APP_DATA
- For outbox subjects: desktop-host connector running

Steps

1. Copy `peergos-app.json` and `assets/` into Drive (or use OrgTool / gallery).
2. Context menu on `peergos-app.json` → ****Install App****.
3. Open from Apps launcher.
4. Dark theme: Peergos passes `?theme=dark-mode`.

Uninstall

Apps launcher → remove `Conn Status`. Data remains under `/.apps/` until deleted.

Developer reference – verae-app-connector-status

Layout

```
```\npeergos-app.json\nassets/index.html\nassets/sdk.js\nsrc/peergos-sdk.mjs\nsrc/lib.mjs\ntests/lib.test.mjs\ntests/certify-peergos.sh\n```\n
```

### ## Integration

Sandbox `fetch` → `/peergos-api/v0/data`.

Outbox JSON → connector → NATS (`verae-nats-bus/schemas/subjects.json`).

Inbox JSON → app lists `/inbox/`.

### ## Tests

`make test` runs Node unit tests against an in-memory `fetch`.

`make certify` adds Peergos compliance (manifest bounds, no NATS/WebSocket).

# Function specs – connector-status

Specialist: Messaging + host engineer.

## listOutbox / listInbox → JSON filenames

## jobStem(name) → string

## classifyJobs(outboxFiles, inboxFiles) → {pending, acked}  
Acked if an inbox name starts with the outbox stem.

# Function specs – connector-status
